School Address: Blacksburg, VA 24060 | Permanent Address: Hopkinton, MA 01748

EDUCATION

Virginia Tech, College of Engineering Blacksburg, VA
Master of Engineering in Computer Science & Applications – Cybersecurity (Accelerated) *Expected December 2026*
Bachelor of Science in Computer Science, Minors in Cybersecurity and Mathematics *December 2025*
GPA: 3.97 – Major Rank: 32 of 906; President’s and Dean’s List
Relevant Coursework: Computer Systems, Network Security, Network Architecture, AI Tools for Software Engineering, Software and System Security, Database Management Systems

PROJECTS

MCCS Sponsored Graduate Capstone Blacksburg, VA
Team Lead *August 2026 – Current*

- Team lead for a graduate capstone sponsored by U.S. Marine Corps Community Services (MCCS), developing an augmented reality application to deliver real-time information to help consumers evaluate products

Release Radar *October 2025 – Current*
[Project Website](#) | [GitHub](#)

- Built a full-stack web application (React, TypeScript, PostgreSQL) enabling users to track watched content, manage watchlists, and discover new titles via real-time TMDb API integration
- Designed a hybrid data retrieval and caching system using TMDb API and PostgreSQL, reducing dashboard load time from ~10s to under 1s and cutting external API calls by 30%
- Developed an interactive release calendar with episode and movie details, filtering by media type, and a personalized dashboard showing watched and watchlisted content across all tracked titles

AI Security Research – XSS Vulnerability Analysis *January 2026 – May 2026*

- Built a Python-based automated pipeline to conduct a security analysis of AI-generated code against XSS vulnerabilities and input sanitization failures
- Logged results to a SQL database and analyzed trends with Matplotlib/Pandas across models and prompt types, informing mitigation strategies for safer LLM code adoption

Hokie Scheduler II – Capstone Project *August 2025 – December 2025*

- Built a course scheduling platform processing 1,000+ course records from multiple sources, with a React + Tailwind frontend enabling students to browse courses, generate schedules, and plan registration
- Designed and implemented a RESTful API (Express, TypeScript) supporting multi-source course data and concurrent access for 100+ simultaneous users

WORK EXPERIENCE

Basis Digital Biotech Boston, MA
Cybersecurity Intern *May 2025 – August 2025*

- Monitored Microsoft Defender for Endpoint across client environments, identifying threats, analyzing risky user behavior, and escalating security incidents
- Helped clients achieve a Microsoft Secure Score 56% above the industry average for similarly sized organizations through consistent monitoring and implementation of security best practices
- Ran internal phishing campaigns for clients, resulting in a ~20% improvement in phishing detection
- Automated monthly security threat reports using Python and the Microsoft Graph API, delivering executive-level summaries of Defender alerts, phishing activity, and user risk scores for client stakeholders

TECHNICAL SKILLS

Languages: Python, TypeScript, Java, C, SQL, MATLAB
Frameworks and Libraries: React, Tailwind CSS, Express.js, NumPy, Pandas, Matplotlib
Tools and Platforms: Git, Docker, Linux, PostgreSQL, REST APIs, Microsoft Defender, Microsoft Graph API
